

THE SOVEREIGN WORKPLACE PLATFORM

Communicate freely. Own your data.

VNClagoon is an integrated, open-source-based suite for messaging, video, email, groupware and project management — deployed and controlled by you. On-premises, private cloud, or hybrid.

End-to-end encryption · Single sign-on · GDPR-native · No vendor lock-in

THE SHIFT

Why organizations are moving to sovereign collaboration

End vendor lock-in

Escape rigid, proprietary ecosystems. Open standards keep you free to move, integrate and extend.

Reclaim data sovereignty

Meet strict compliance and residency rules. Your data stays in your infrastructure, under your control.

Control rising costs

Replace unpredictable per-seat licensing with transparent, modular pricing. Pay for what you deploy.

Consolidate the tool sprawl

One interoperable suite instead of a patchwork of disconnected apps and security gaps.

Customers and public institutions increasingly demand secure, sovereign, cost-effective collaboration — without restrictive vendor relationships. VNClagoon is built for exactly that.

One integrated suite — hosted and owned by you

VNClagoon replaces fragmented tooling with a modular, 100% open-source core. Each component runs independently, so you scale up or down without lock-in or feature bloat — and enhance productivity with AI that never leaves your control.

- ✓ **100% open-source core** — Full transparency and auditability — no black boxes.
- ✓ **Modular microservices** — Independent components; seamless scaling and updates.
- ✓ **Sovereign AI layer** — Confidential AI operated inside your infrastructure.

DEPLOY IT YOUR WAY

On-premises

Full control for maximum security and compliance.

Private cloud

Dedicated, isolated environments for performance.

Hybrid

Combine on-prem control with cloud elasticity.

Multi-cloud

Avoid single-provider dependency; stay portable.

Six reasons IT leaders choose VNClagoon

Digital sovereignty

Full control over your data and infrastructure — independent of external providers and their terms.

Fortified security

Strong encryption and robust protocols safeguard every message, file and call — end to end.

Flexible modularity

Select only the components you need. Scale without lock-in or unnecessary feature bloat.

Built-in resilience

Distributed architecture ensures high availability and no single point of failure.

Lower, predictable TCO

Transparent pricing and efficient resource use cut total cost versus proprietary suites.

Sovereign AI

Integrated AI enhances collaboration while your sensitive data stays inside your control.

Everything your teams need, under one roof

COMMUNICATION

VNCtalk Chat, video & audio

VNCmail Secure email

VNCchannels Knowledge sharing

AI-powered. Privately operated.

Intelligent assistants

Workflow automation that adapts to your organization and saves time.

Smart search

Rapid AI search and summaries across your data — insight into action.

Multilingual NLP

Break language barriers with secure, seamless communication.

Sovereign by design

Your data never leaves your infrastructure. Privacy stays intact.

KEY DIFFERENTIATOR

Cutting-edge AI combined with complete data sovereignty — a rare advantage for organizations that refuse to trade privacy for productivity.

Built with Intel & Lenovo

Built for organizations where security is non-negotiable

Government & public sector

Sovereign IT requirements met; national and citizen data protected.

Finance & healthcare

Strict compliance and data-security mandates handled by design.

Enterprises

Enterprise-grade security with cost optimization and flexibility.

NGOs & education

Affordable, scalable collaboration without compromising security.

“The DFBnet mailbox by VNC has simplified and accelerated our communication.”

Steffen Iredi

Director of Technology & Operations, DFB GmbH

#1

Ranked in the Second Source Study by Digital Administration Switzerland for secure collaboration.

What VNClagoon unlocks for your business

Navigate complex regulation

Meet data-sovereignty and compliance requirements with confidence.

Reliable, adaptable infrastructure

Open-source architecture that scales and integrates across environments.

Integrated, secure collaboration

Robust security, modular flexibility and AI in one coherent platform.

Operational excellence

Future-proof your organization at the front of sovereign, AI-driven work.

READY WHEN YOU ARE

See VNClagoon in your environment – book a demo.

A tailored 30-minute walkthrough of the suite, mapped to your compliance, deployment and cost requirements. No obligation.
